
- WWII

  armor

- heavier

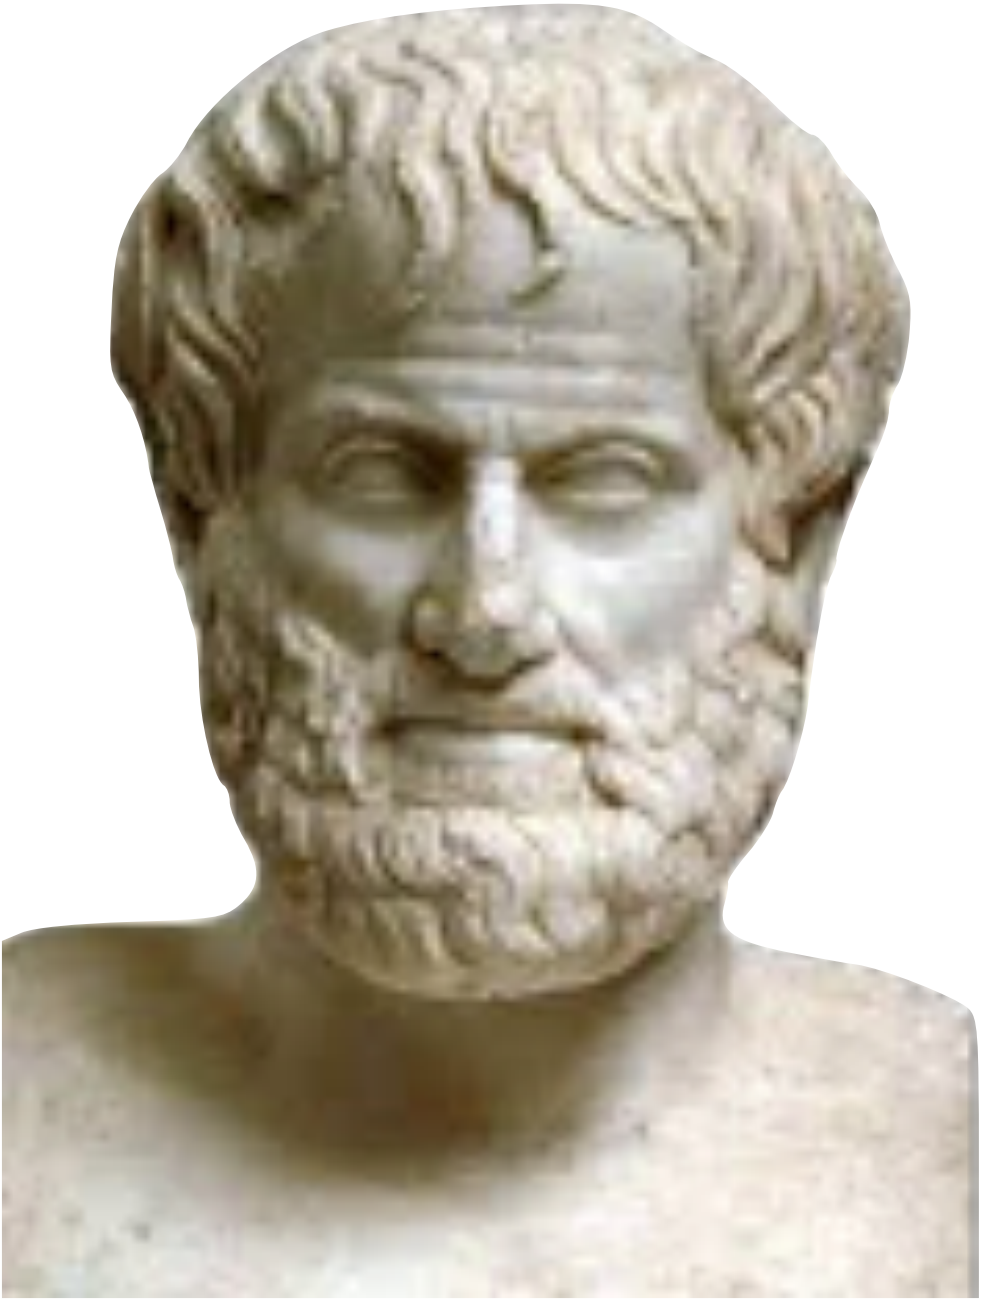
  less maneuverable

  more fuel

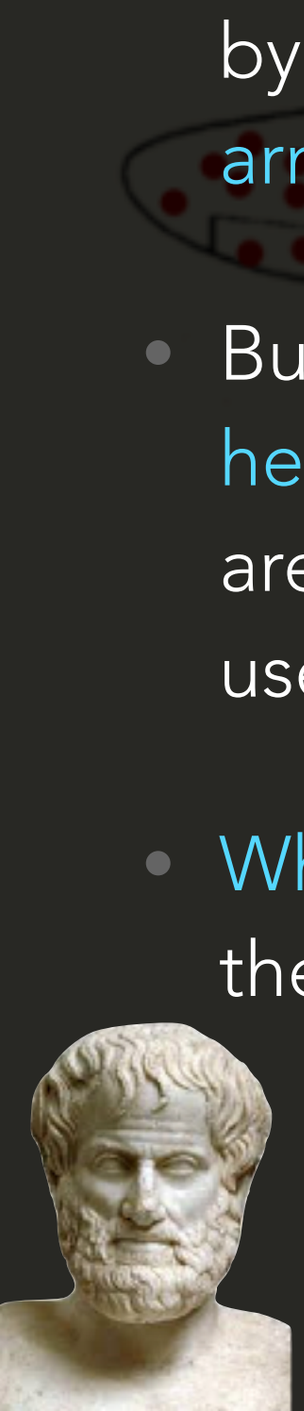
- Where

"To see what is in front of one's nose needs a constant struggle."

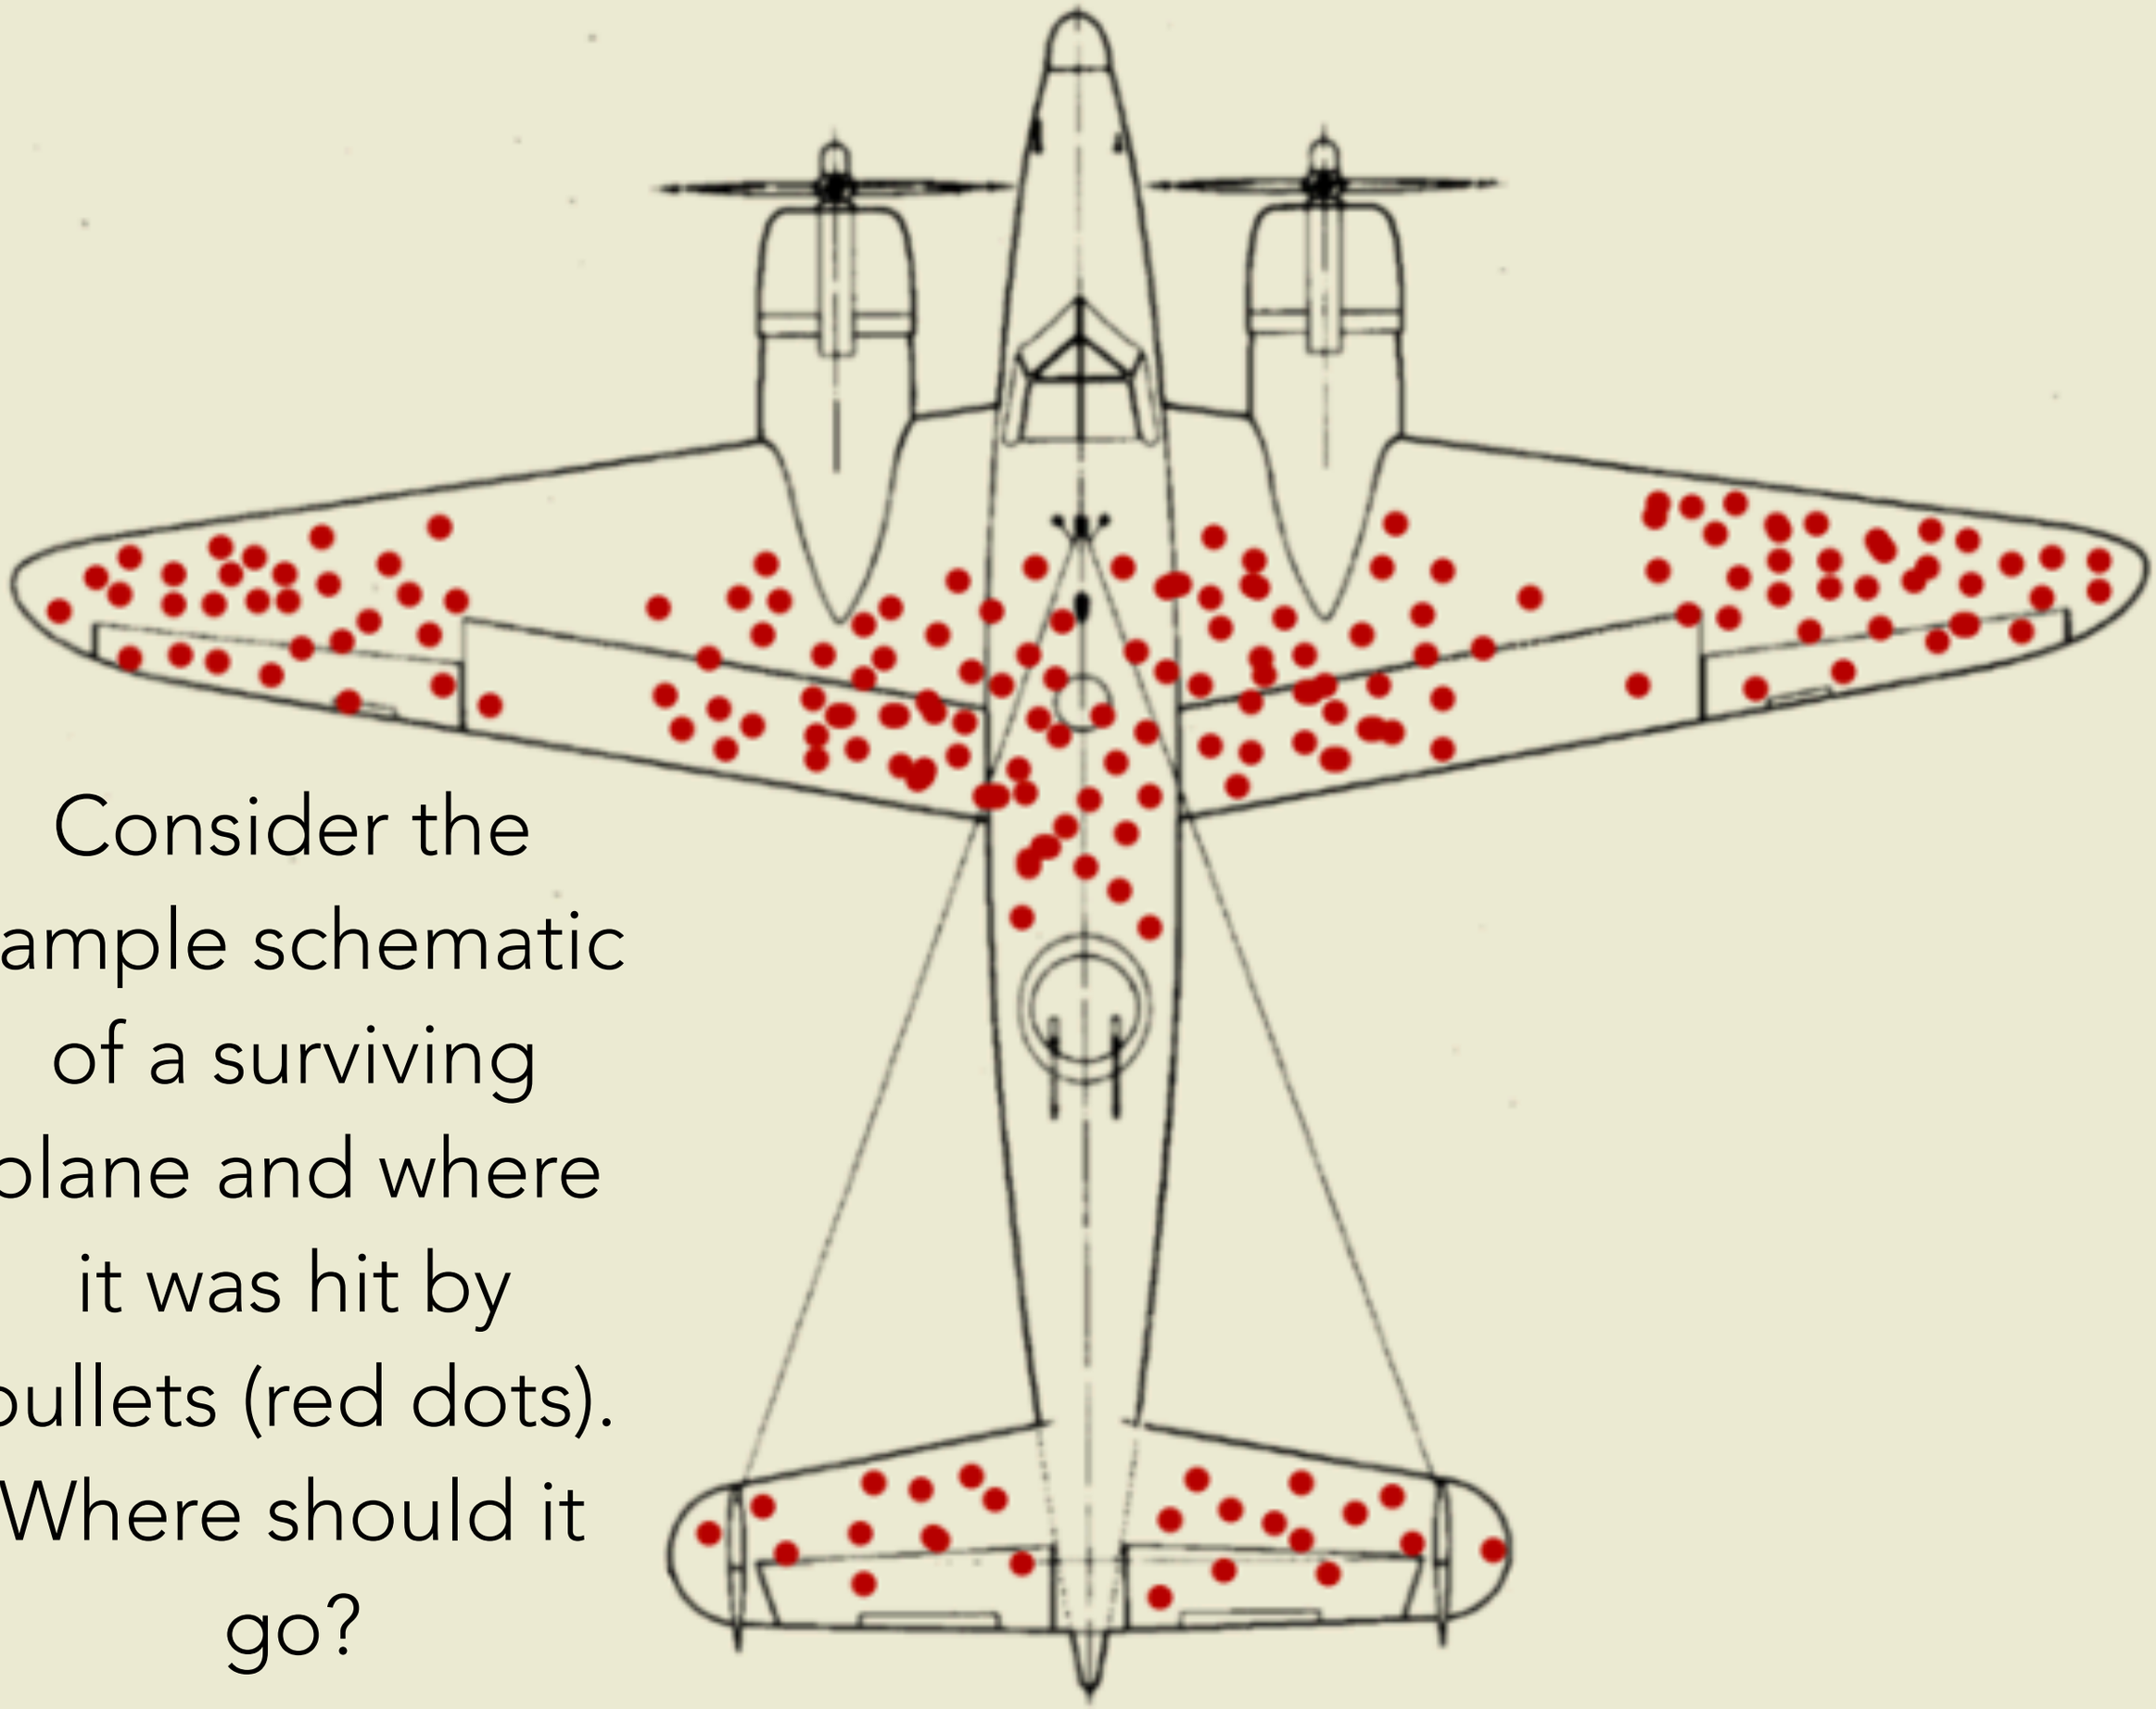
George Orwell



- It's **WWII**. You don't want your planes to get shot down by enemy fighters, so you armor them.
- But armor makes the plane heavier, and heavier planes are less maneuverable and use more fuel.
- Where do you add armor to the plane?



"To see what is in front of one's nose needs a constant struggle."

George Orwell


Consider the sample schematic of a surviving plane and where it was hit by bullets (red dots). Where should it go?
