

THOMAS KUHN AND SCIENTIFIC REVOLUTIONS

The Structure of
Scientific Revolutions
Second Edition, Enlarged
Thomas S. Kuhn

"A landmark in intellectual history."
—Science

SCIENCE

- “Science does not track the [T]ruth, but creates different partial views that can be considered to contain [t]ruth only by people who hold those views.”
- Changes in (normal) science are incremental, a simple notion of progress with strong sense of justification and rationality.
- Changes in revolutionary science are complete overthrow of the dominant paradigms.
