what counts as science and what doesn't

SCIENCE, DISCIPLINE, AND KNOWLEDGE

- **Boundary-work** describes the practices scientists use to draw distinctions between “**real**” science and “**non-science**.”
- E.g., the difference between an experiment carried out in a multi-billion dollar research lab and an amateur’s basement.
- At stake is **epistemic authority**: the ability to determine **what counts as science and what doesn't**.

COMMUNITIES, NATIONAL IDENTITIES, AND SPATIAL BOUNDARIES
