

NETWORKS

- **Networks** are a set of objects and a description of relationships between them.
- Human **social** networks have been around as long as the earliest hunters and gatherers.
- The **internet** has revolutionized social networks' geographical foundations.
- **America** has become transformed from social relations and networks based on place or kinship, into communities oriented around **geographically** dispersed social networks.

WHAT DATA IN A NETWORK LOOK LIKE.

Can also have multiple relationships (**multiplex**).
