

# TAXIS AND COSMOS

- Hayek was a conservative Austrian-British economist interested in economic (and personal) “liberty.”
- To Hayek, order in a society occurs when intentions and expectations match what people actually do.
- More authoritarian types believe that control, obedience, and hierarchy are needed to maintain order, what Hayek refers to as a “made order.”
- In contrast are “grown orders,” which are spontaneous and grow from within, rather than being dictated from above.
